MEDICAL SUMMARY & CASE OVERVIEW

Aisha Begum, 7 years old, suffers from Tetralogy of Fallot, a congenital heart defect involving four structural abnormalities of the heart. Her oxygen saturation has dropped to dangerous levels, and surgical correction is the only viable treatment.

Her parents are daily wage labourers and are entirely unable to meet the cost of surgery, pre-op diagnostics, and post-operative ICU stay.

Corrective surgery carries a 95% success rate when performed promptly. Without surgery, the risk of fatal cardiac events increases exponentially each month.
